

Chemical Policy

At Dollar Tree we are committed towards providing our customers with safe, sustainable, exciting and affordable products.

We implemented our sustainable chemical plan in 2016 as an initiative to identify and reduce chemicals of high concern in our products. We are working with our suppliers to identify and implement safe alternatives to chemicals of high concern.

Our management team is fully committed towards our policy and will report our progress to our board of directors.

Our plan goes above and beyond regulatory requirements.

We encourage our suppliers of national brand products and private label goods to find alternatives to chemicals listed on our priority chemical list and continue to innovate and provide options for safe, effective products that meet the expectations of our consumers.

Transparency and Action Steps

We are challenging our suppliers and will require that they disclose full ingredients for formulated products that contain chemicals as part of their base formulation. Examples include but are not limited to categories such as household cleaning products, health and beauty products and hardware products.

All ingredients will be disclosed by suppliers and entered into The WERCS for formulated products containing chemicals as part of the base formulation. The WERCS is an independent third party platform that allows retailers to collect, manage and evaluate manufacturer product data.

We will measure by UPC the number of items registered within The WERCS.

We will identify and measure the number of items within our assortment that contain priority chemicals.

We will identify and measure the number of suppliers that have products containing priority chemicals.

We will provide updates on our results starting in 2019 with our sustainability report.

We will encourage our suppliers of national brand products to disclose product ingredients online by product.

We will participate in the Chemical Footprint Project starting in 2019.

We have a goal of eliminating the chemicals identified on our priority chemical list from private label products by 2020 or sooner by working with suppliers on safer alternatives.

We will operate under an environment of continuous improvement to ensure we provide the very best possible product to our customers.
